Threat Intelligence: Smart Security For Your Network

Introducing ClearSignal AI – the system that cuts through the noise and finds real cyber threats before its too late

The Alert Fatigue Crisis

The Problem

90% of security alerts are false alarms — a needle in an impossibly large haystack

Who Suffers

Enterprise SOC analysts face severe burnout chasing ghosts across thousands of daily alerts

The Cost

Real attacks go undetected while human analysts drown in noise — and adversaries win

90%

False Alarms
of all SOC alerts are noise

4h+

Mean Detection
time per real threat today

Our 4-Step AI Pipeline

AI Filter

The Bouncer — instantly drops benign glitches and false alarms before they waste analyst time

Threat Matcher

The Detective — matches attack sequences to known hacker profiles and behavioral signatures

Auto-Mitigate

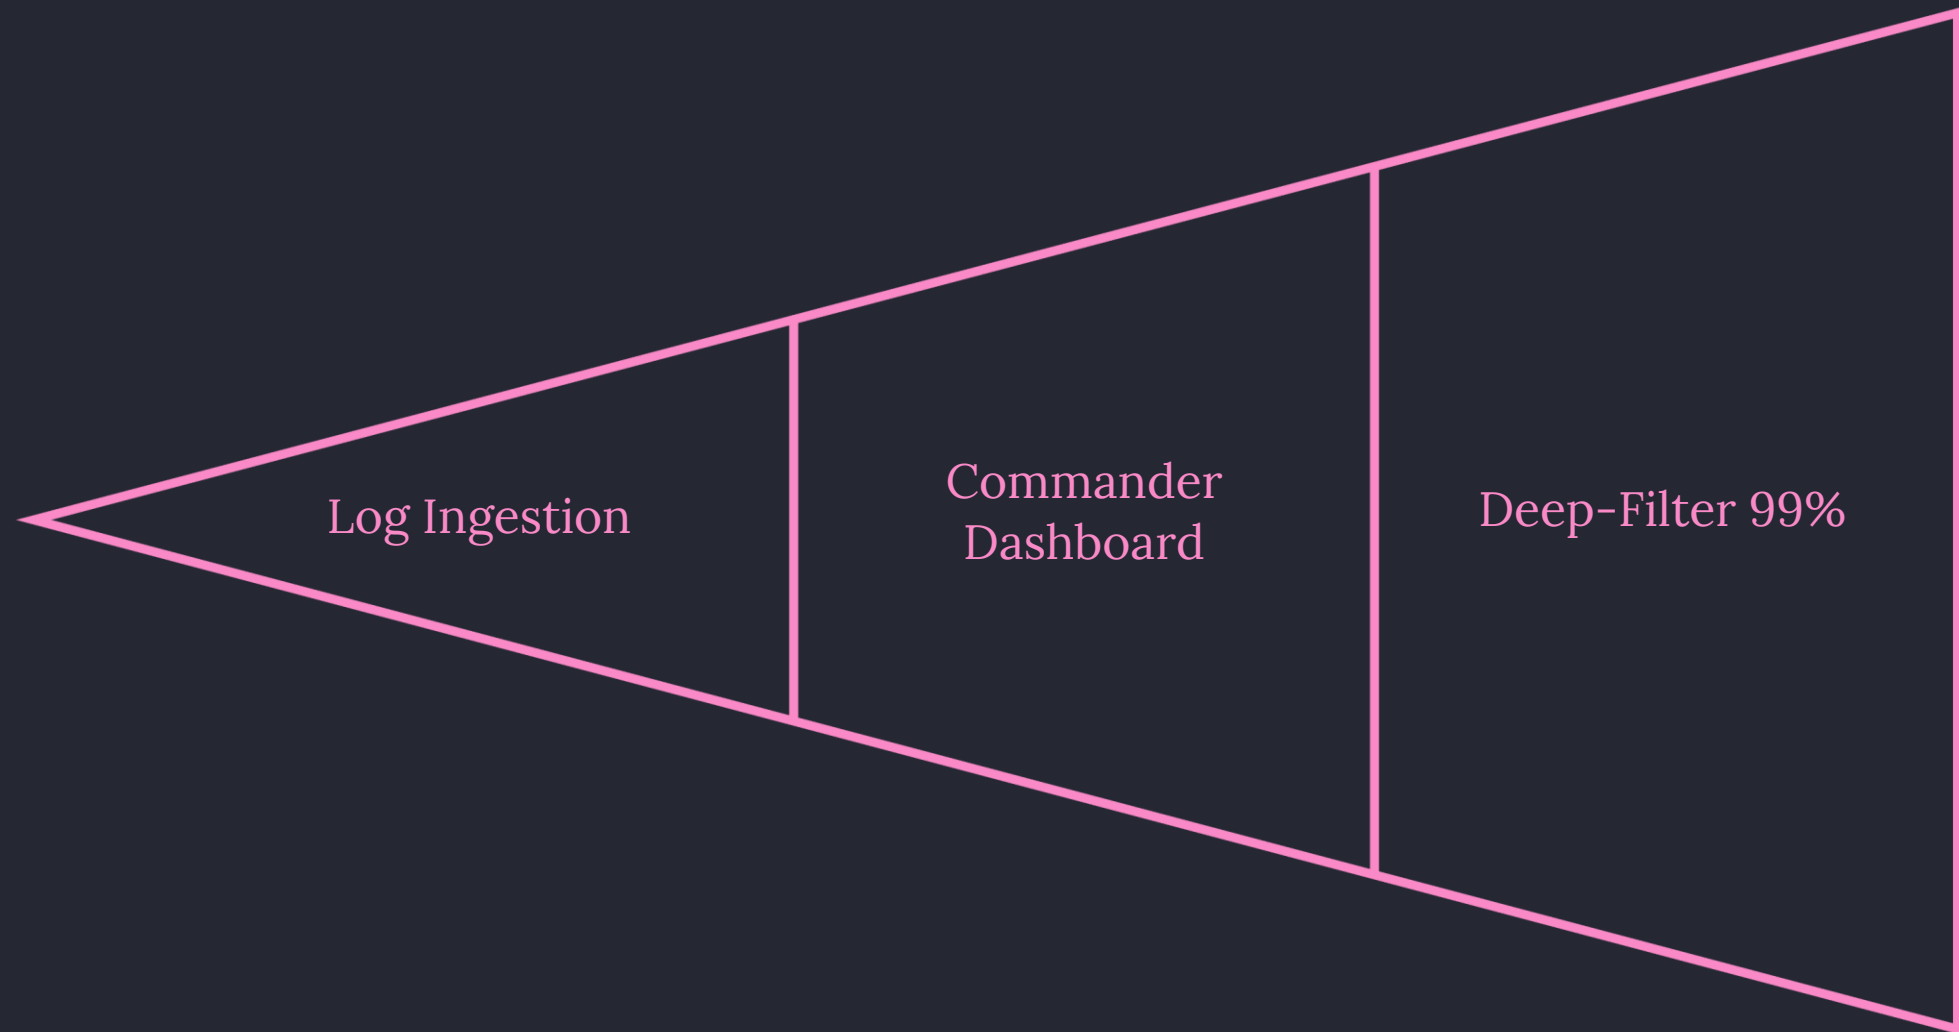

The Shield — blocks attacking IPs instantly without waiting for human approval

Exec-Report

The Reporter — writes 3-bullet plain-English summaries for commanders in seconds

System Architecture

From raw chaos to actionable intelligence in milliseconds — every stage automated, every decision auditable.

☆ STANDOUT FEATURE

The Commander Summary

✗ Before

Raw JSON logs, hex codes, terminal noise — completely unreadable to leadership under pressure

✓ After

🚨 **"Brute Force attack on Database Server by 'Red Dragon' IP. Blocked. Secured."**

✔ Executives understand threats in **10 seconds**, not 1 hour.

IBM watsonx.ai Integration

Generative AI Engine

IBM watsonx.ai powers the **Reporter** module at the heart of ClearGuard AI — ingesting complex, multi-vector attack data and transforming it into precise, plain-English executive threat briefs that commanders can act on immediately.

Why watsonx.ai

- Enterprise-grade accuracy on domain-specific security data
- Generates actionable threat summaries in <2 seconds
- Structured output designed for non-technical stakeholders
- Seamless integration into the ClearGuard pipeline via API

Results: Before vs. After

0

<2s

10s

False Alarms Processed by Humans

Down from 10,000/day — AI handles every one automatically

Threat Identification

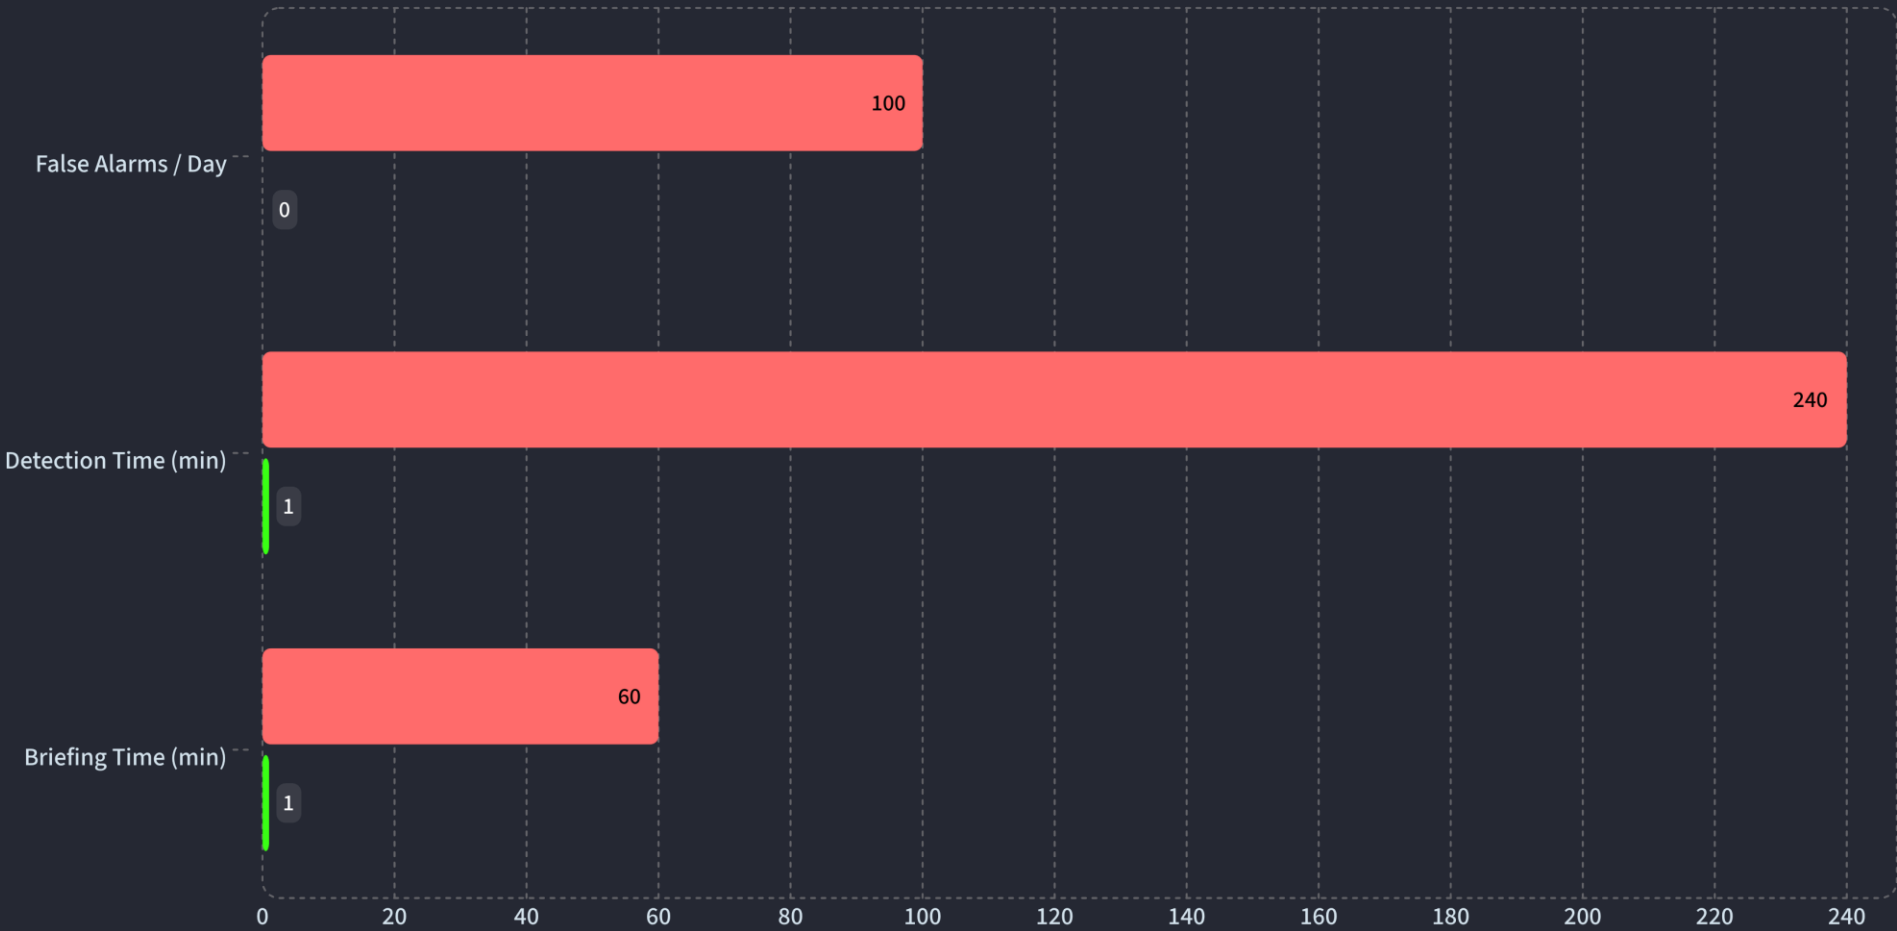

Down from 4+ hours of manual analyst investigation

Executive Briefing

Down from 1 hour of report writing and translation

Before (normalized) After (normalized)

Metric

The Team

[Name 1]

AI & NLP Integration

Watsonx pipeline architecture
and generative summary
engine

[Name 2]

Backend & Architecture

Data ingestion, filtering flow,
and system scalability

[Name 3]

Frontend & Dashboard

Commander UI design and
real-time alert visualization

[Name 4]

Cybersecurity Logic

Threat matching rules,
behavioral signatures, and IP
blocking
